Grey-faced petrel: pp 62-63
New Zealand range Common in northern New Zealand waters.

Description
Face and throat Grey. Upperparts and underparts Blackish-brown. Bill and feet Black.

Conspicuous features
- Generally an all black bird.
- Wings are long and narrow.
- Has short dark bill.
- Has grey on face.

Conspicuous characteristic
- Birds toss into the air at a fast pace before plunging again down near the wave crest.

Call A guttural “oi oi oi” is made by birds when near their burrows.

Differences between Grey-faced Petrels, Black Petrels, Sooty Shearwaters and Flesh-footed Shearwaters
- The Grey-faced Petrel has a short, almost stubby, black bill when compared with the long thin bills of the shearwaters.
- Grey-faced Petrels have a black bill.
- Black Petrels have a yellowish bill tipped with black.
- Sooty Shearwaters have a dark grey bill.
- Flesh-footed Shearwaters have a yellowish bill tipped with brown.
- The Grey-faced Petrel, Black Petrel and Sooty Shearwater, have black legs and feet which separate them from the Flesh-footed Shearwater which has flesh coloured feet.
- The Grey-faced Petrel has a grey face.
- The Grey-faced Petrel is a fast flier tending to bounce up off the waves to a much higher altitude than Sooty and Flesh-footed Shearwaters, which are more wave skimmers.
- The Grey-faced Petrel lacks the silver underwing of the Sooty.

Where to find – North Island
Northland – Bay of Islands beyond Cape Brett.
Coromandel – Towards Mercury Islands.
Bay of Plenty – Towards White Island. There is an active breeding colony on Mount Maunganui and nearby Motuotau Island. P. 319.
